

APQP for Aerospace Course Objectives

- Explain the purpose and benefits of the APQP process and use the sequential phases of the APQP process.
- Learn how to assess the practicality and feasibility of the Business Case.
- See how inputs for the process design are generated using customer requirements.
- Understand how the process is developed using the product design, process flow and layout concepts as inputs.
- Be aware of how both the product and process are validated to meet customer requirements.
- Be cognizant of the conditions needed for a production launch,
- Be familiar with the Production Part Approval Process (PPAP).
- Know about tools and techniques that are used to continuously improve both the product and its corresponding process.
